I have been trying to disable the shift key following a previous post. I made a new module and pasted the following code, (also I changed the sequence of the ADO and DAO references) pressed Ctrl-G and pasted `faq_DisableShiftKeyBypass("c:\path to your db\whatever.mdb", True)` corrected the path and hit Enter and I get a Compile Error: Expected: =. I believe I have followed to the letter and I need help. Thanks for any help.

```
Function DisableShiftKeyBypass(strDBName As String, fAllow As Boolean)
As
Boolean
```

```
On Error GoTo errDisableShift
```

```
Dim ws As Workspace
Dim db As Database
Dim prop As Property
Const conPropNotFound = 3270
```

```
Set ws = DBEngine.Workspaces(0)
Set db = ws.OpenDatabase(strDBName)
```

```
db.Properties("AllowByPassKey") = Not fAllow
DisableShiftKeyBypass = fAllow
exitDisableShift:
Exit Function
```

```
errDisableShift:
'The AllowByPassKey property is a user-defined
' property of the database that must be created
' before it can be set. This error code will execute
```

Bypass Shift Key Problems...Help Please

' the first time this function is run in a database.

If Err = conPropNotFound Then

' You must set the fourth DDL parameter to True

' to ensure that only administrators

' can modify it later. If it was created wrongly, then

' delete it and re-create it correctly.

Set prop = db.CreateProperty("AllowByPassKey", dbBoolean, False,

True)

db.Properties.Append prop

Resume

Else

MsgBox "Function DisableShiftKeyBypass did not complete
successfully."

DisableShiftKeyBypass = False

GoTo exitDisableShift

End If

End Function
