OK, after installing that one, I see that it is secured. The vendor didn't provide the development mdw it was secured with; as a user you are meant to use it with the standard system.mdw.

The demo is in 97, and given your initial message, I take it you are trying to open it using a newer version. You won't be able to.

I suggest you contact the vendor to see if they have an upgraded version of it.

I am trying to open a database designed in Access 97 and am getting the message "The Current user account doesn't have permission to convert or enable this database". I have tried the resolutions suggested at

<http://support.microsoft.com/kb/288960/>

but I cannot get the database to open. The KB states to "Remove the Admin account from the Admins group" but Access won't let me do this. Nothing else in the article works.

I tried to import the objects into a new database but I only get the tables and queries. When I try to import the forms and reports I get the message "You don't have permission to import, export, or link to (Form/Report)." I am currently logged in as Admin, but the Admin user/group does not have permissions to 'Modify Design' or 'Read/Update/Insert/Delete Data'. Those boxes are grayed out for Database, Form, & Report Objects. Is that normal? It

does not prevent me from modifying anything in any other database.

Re: Cannot convert or enable database

Any help is appreciated.
