Not sure what what happened to my first reply but here it is again.

Make a new database.

Add this public function:

Public Function ChangeShift(strMDBName As String, fChange As Boolean)

On Error GoTo ChangeShift_Err

Dim db As Database, prp As Property

Set db = DBEngine(0).OpenDatabase(strMDBName)

db.Properties("AllowBypassKey") = fChange

ChangeShift_Done:

MsgBox "The proper"

Set db = Nothingty 'AllowBypassKey' from" & vbCrLf _

& strMDBName & " was changed successfully to " _

& fChange & """, vbInformation, "ChangeShift"

ChangeShift_End:

Set prp = Nothing

GoTo Function_End

ChangeShift_Err:

If Err = 3270 Then

Set prp = db.CreateProperty("AllowBypassKey", dbBoolean, _

fChange, True)

db.Properties.Append prp

GoTo ChangeShift_Done

Else

MsgBox "Error # " & Err & " @@" & Err.Description, _

vbExclamation, "Error"

End If

Resume ChangeShift_End

Function_End:

End Function

Then Add these two command button onclick events to Lock(disable shift) and

RE: protect my data base window

unlock(enable shift) respectively.

ChangeShift InputBox("Please Enter a Path to the Database.", "Lock"), False

ChangeShift InputBox("Please Enter a Path to the Database.", "UnLock"), True

"Yousoft" wrote:

I set my data base file to startup mode and hide the (Data Base Window), but my problem I want to protect my data base window to not view, by pressing (shift+enter) to the specific data base file.

Thanks
