You already asked this in the REPORT newsgroup. Please stick to one post per question. No need in two people investing time to research and respond if the first answer is correct.

Hello,

I am looking to create a report down the road where sums of categories are created.

I currently have a table with a field that is populated by a calculation in a query. It is further categorized by an account. For example:

2 dogs 100  
1 cats 200  
3 birds 300  
3 dogs 150

If on a report I need to see:

dogs 250 cats 200 birds 300

How would I do that? Should I have different fields in the Table's design or in the Report's design?  
Thanks  
JC papi

BTW How do I post to two groups, this one and the report design?
