Phil

It sounds like you are saying one Event can have zero, one, or many Workshops, and that Attendees are registering for Workshops rather than Events.

If you add a Workshop table, then use WorkshopID in your trelRegistration table, would that do it?

I have an events database that I now need to add workshops, the basic structure of the tables is

Events:

EventID

Attendee:

AttendeeID

Registration:

RegistrationID

EventID

AttendeeId

the real world situation is that some events we run have workshops, normally the group will split into smaller groups and attend one of the sessions

Re: Events with workshops

e.g.
Bereavment
MCA
Cancer

Each event may have more than one workshop in a day, one workshop or none at all. I have no idea how to design the table structure, do I need seperate tables for Workshops, sessions. Any advice would be greatly accepted. If you need any more info let me know

Thanks

Phil
