Hi all

I've just started gettin the following error on a SBS4.5 Domain and a Win2k (not on a NT4 WS)

401.2 Unauthorized: Logon Failed due to server configuration

It happens when I try and go onto the internet (and I'm the Administrator)!

We dont have any fancy Web service or publishing running just the core Proxy, Exchange etc

Any suggestions to whats going on would be great thanks in advance
James
