**\*Why was this security bulletin updated on November 16, 2004?\***

After the release of the MS04-039 security bulletin, Microsoft became aware of an issue affecting ISA Server 2000 Service Pack 1 customers. The original version of the ISA Server 2000 security update did not include all of the required binaries on systems using ISA Server 2000 Service Pack 1. This issue could cause ISA Server 2000 to not function correctly. Customers using ISA Server 2000 Service Pack 1 should install the updated version of this update. Customers using ISA Server 2000 Service Pack 2 do not need to re-install this update if they were able to successfully install the original version of this update. The original version of this security update did protect against the vulnerability described in this security bulletin.

A second issue with the original version of the security update was also found that affected customers using Windows 2000 Service Pack 3. The original version of the security update was designed to require Windows 2000 Service Pack 4. Customer using Windows 2000 Service Pack 3 should install the updated version of this security update. It has been updated to install successfully on systems using Windows 2000 Service Pack 3. Customers using Windows 2000 Service Pack 4 with ISA Server 2000 Service Pack 2 do not need to install the updated version of this security update. The original version of this security update did protect against the vulnerability described in this security bulletin.

Both issues affected all language versions of the ISA Server 2000 security update.

**\*Why was this security bulletin updated on November 9, 2004?\***

After the release of the MS04-039 security bulletin, Microsoft became aware of an issue affecting ISA Server 2000 customers deploying the German language version of the security update. The originally released version of the ISA Server 2000 German language security update required ISA Server 2000 Service Pack 2. The updated version of the ISA Server 2000 German language security update can be installed on ISA Server 2000 systems using ISA Server 2000 Service Pack 1 or ISA Server 2000 Service

Pack 2. This issue only affected the German language version of the security update. The original version of this security update did protect against the vulnerability described in this security bulletin. Customers using the German language version of ISA Server 2000 Service Pack 2 who successfully installed the originally released security update do not need to take any action
