Just what "tinkering" did you do ?

Did you keep a Change Log so you can undo it ?

Is there a Firewall Router between your SBServer and the internet ?

Have you opened port 25 in it ?

Does local mail deliver ?

internet & email wizard - but I cannot send mail for some reason.

>

> I've tried using both DNS and a smarthost to route mail. I've tried my  
comcast email server (my ISP) and the mail server where I have email  
accounts because they host a website for me. Nothing seems to get mail  
out.

>

> Initially, I found files in the BadMail folder. I deleted those and  
tinkered with the SMTP connector some more. I'm not getting anything in  
the BadMail folder, but mail apparently is going nowhere.

>

> I see the message quickly leave the Outbox and I don't get any  
undeliverable messages. Where is the mail going? Where can I look for  
it? Any help would be appreciated.
