Using WU on the SBS server is fine as long as you follow a couple of simple rules (IMO):

1. I always reboot the server before performing any updates to it
2. Make sure you have a recent tape backup available.
3. Stop Exchange services
4. Only apply Critical patches – don't apply the other recommended patches or the drivers
5. Understand that WU does NOT report all possible required patches – it doesn't report patches for Exchange, ISA or SQL
