Your going to need a packet filter in ISA to allow outbound traffic on port 110. Since you haven't (won't) run ICW, you can create it manually. The name for it when created by ICW is: "BackOffice POP3 110 Out CustomFilter". You can use that name. Here's the procedure... (see Chad's post directly above Wallace's)

<http://groups.google.com/groups?hl=en&lr=&threadm=Uhq87iLDHA.628%40cpmsftngxa06.phx.gbl&rnum=7&prev>

You may want to reboot the server after you create the filter.

Not sure why MS PSS told you not to run ICW again. What they may have meant was that, if you run ICW and allow ISA firewall to be reconfigured, it will disable any "custom" packet filters you've created in the past. You would then have to manually go in and re-enable them (no big deal, just open them and put a checkmark in "Enable").
