Having your Outbound mail forwarded through your ISP will fix the bouncing issue. There should be no cost to forward your Outbound mail off your ISP mail server. Contact their tech support to request what credentials you will need to authenticate and relay off their servers. As for AntiSpam service, I prefer [www.spamsoap.com](http://www.spamsoap.com).

Hi there

We have an sbs 2000 with exchange and a fixed IP over an ADSL line. Our problem is that the our IP address is included in a block of address that is listed as a spam source. Now with the recent surge in spam our legitimate emails are getting bounced. Our ISP supplier is a monopoly so they could not care less about his problem.

My question is: could forwarding our email to an SMTP service solve the problem? I know that there is going to be a cost, but something is better than nothing. By the way we are thinking about getting one of those antispam tools too!!! Also do you know somebody who can provide the service.

If you have any pointer please feel free to post them.

Regards

Miguel Sanchez
