One of common reasons for this could be because of security setting in Internet Explorer. Try adding your web site in the Trusted Zone from the Internet Explorer and try again. The error -2146828218 indicates that you don't have required permission. It is usually because the XMLHTTP object used in the InfoPath solution's script doesn't have permission to access the URL specified.

If you still fails, try debugging the InfoPath solution by adding "debugger" statement in the script. It should be "stop" if the script is VBScript. Check InfoPath web site for getting information about debugging the solution.

Thanks,
Sung-Hwa Jin
