Hi,

As Jan had suggested, I believe Biztalk needs to have read and write access to the receive folder. Can you verify that you have write access to the receive folder? Also, did you see any event errors in the Application eventlog?

Thanks,

---

| Hi  
|  
| The user that is actually picking up the file needs rights to read AND  
| write the file (the file must be deleted after it has been picked up).  
|  
| Could this be it?
