fixed it finally, granted permission for Biz Users to modify etc... in the folders!

by the way, do you need to specify the filter when creating the send port? i tried to not have the filter but it won't transfer the file, the following error comes up in the event viewer:

The "FILE" adapter is suspending a message coming from Source URL:"C:\TestApp\BTS\_Test\In\\*.xml". Details:"Could not find a matching subscription for the message. ".

Any idea???

Thanks
