

Re: FTP Send Port doesn't transmit messages!

Source: <http://www.tech-archive.net/Archive/BizTalk/microsoft.public.biztalk.general/2004-12/0854.html>

From: Kamal (*kali_at_bca-group.com*NOSPAMPLEASE)

Date: 12/23/04

Date: Thu, 23 Dec 2004 13:10:33 -0000

in log file got nothing in it:

```
< 220 FTPServerName Microsoft FTP Service (Version 5.0).
> USER TestSFTP
< 331 Password required for TestSFTP.
> PASS xxxx
< 230 User TestSFTP logged in.
> PWD
< 257 "/" is current directory.
> CWD Temp
< 250 CWD command successful.
> PWD
< 257 "/Temp" is current directory.
> TYPE A
< 200 Type set to A.
> PORT .....,.....
```

(Note: in FTPServerName below, it displayed the name of the server correctly. in Ports, it displayed 5 different numbers!)

and in the Event Viewer, the following warning message came up as usual:

The adapter failed to transmit message going to send port "ftp://FTPServerIPAddress:21/Test_FTP/%MessageID%.xml". It will be retransmitted after the retry interval specified for this Send Port. Details:"An unexpected failure occurred while processing a message. The text associated with the exception is "8p· x S". "

and then the following warning message came up twice as well:

The adapter failed to transmit message going to send port "ftp://FTPServerIPAddress:21/Test_FTP/%MessageID%.xml". It will be retransmitted after the retry interval specified for this Send Port. Details:"An unexpected failure occurred while processing a message. The text associated with the exception is "" ". "

and then two error messages appears in the event viewer and they are:

microsoft.public.biztalk.general: Re: FTP Send Port doesn't transmit messages!

1) The "FTP" adapter is suspending an outbound message going to destination URL: "ftp://FTPServerIPAddress:21/Test_FTP/%MessageID%.xml". Details: "An unexpected failure occurred while processing a message. The text associated with the exception is "" .".

2) The Messaging Engine has suspended "1" message(s) from adapter "FTP" due to failures in message processing. Please refer to Health and Activity Tracking tool for more detailed information on this failure.

in HAT, executed the Messages referenced by suspended services query, viewing the service details the following error description is included:

An unexpected failure occurred while processing a message. The text associated with the exception is "".

and in the Message flow, the Error info (BTSAdapterException)

The log file shows only the above text repeated three times!!!

I don't know what to do next, it's been about 4 days now, and it's getting frustrating and very urgent!!

I tried SFTP (3rd party component) but i came up with similar issues too....!! :o(.....

Any help, comments, suggestions, tutorials, links, articles would be very very much appreciated...

Thank you in advance..

Kamal
