Hi All!

So now I hane installed Biztalk Server 2004. and need to use MSMQ Adapter.  
Some days ago I tried to use MSMQC, but today I've founf here link to  
Microsoft Biztalk Adapter for MSMQ.  
So I've unistalled MSMQC and install this adapter. After that I've just try  
to run very simple sample – read message from file and write it into queue.  
And received this error in my event log:

The Messaging Engine failed to create the transport adapter "MSMQ",  
Reason:"Could not load type Microsoft.BizTalk.MsmqAdapter.MsmqTransmitter,  
Microsoft.BizTalk.Adapter.MSMQ.MsmqAdapter, Version=3.0.1.0,  
Culture=neutral, PublicKeyToken=31bf3856ad364e35 from assembly  
Microsoft.Samples.BizTalk.Adapters.MSMQC.Runtime, Version=1.1.0.0,  
Culture=neutral, PublicKeyToken=08f5e664b81cb299."

I cannot understand – why Microsoft.Samples.BizTalk.Adapters.MSMQC.Runtime  
present there??? if MSMQC successfully uninstalled? and what can I do?

Many thanks ....
