Hi!

I have tried the following

for all .exe files in <Program Files>\Microsoft BizTalk Server 2004
in their .exe.config file in <configuration> section:

```
<startup>  
<supportedRuntime version="v1.1.4322" />  
<requiredRuntime version="v1.1.4322" />  
</startup>
```

Restarted, but no luck.. the problem is still there.

DLL:s doesn't have their own .config-files, so how could this help?
Anything else I can try?
