-

The issue is reported in the Biztalk HAT as permissions issues. We are transmitting a file to an FTP location, the FTP adapter is set up, and the 2 send ports in use are set up using a username and password to access the destination ftp folder.

Here is the setup on the send ports:

folder: destfolder
Log: C:\Program Files\Microsoft BizTalk Server
2006
Password: *****
Port: 21
Representation: binary
Server: 192.000.000.00 [actual site is
different]
SSO Affiliate: blank
TargetFileName: Det_0107.txt
UserName: OurUname

ConnectionLimit: 0
TemporaryFolder: destfolder/tmp

ERROR RECEIVED WITH ABOVE CONFIG:
"A failure occurred when moving the file from the spooling folder to
the destination folder.
Please verify the destination folder has the correct permissions."
The file is transmitted to the temporary folder, but moving it to
'destfolder' is unsuccessful.

Here is a variation we used, and it DID work, without the
temporaryFolder:

folder: destfolder
Log: C:\Program Files\Microsoft BizTalk Server
2006
Password: *****
Port: 21

BTS 2006 FTP Adapter spooling permissions

Representation: binary
Server: 192.000.000.00 [actual site is
different]
SSO Affiliate: blank
TargetFileName: Det_0107.txt
UserName: OurUname

ConnectionLimit: 0
TemporaryFolder:

Here is another variation that did not work, completely:

folder: destfolder
Log: C:\Program Files\Microsoft BizTalk Server
2006
Password: *****
Port: 21
Representation: binary
Server: 192.000.000.00 [actual site is
different]
SSO Affiliate: blank
TargetFileName: Det_0107.txt
UserName: OurUname

ConnectionLimit: 0
TemporaryFolder: tmp

ERROR RECEIVED WITH ABOVE CONFIG:

"A failure occurred when moving the file from the spooling folder to
the destination folder.

Please verify the destination folder has the correct permissions."

The file is transmitted to the temporary folder, but moving it to
'destfolder' is unsuccessful.

Here is ONE last variation that did not work, completely:

folder: destfolder
Log: C:\Program Files\Microsoft BizTalk Server
2006
Password: *****
Port: 21
Representation: binary
Server: 192.000.000.00 [actual site is
different]
SSO Affiliate: blank
TargetFileName: Det_0107.txt
UserName: OurUname

ConnectionLimit: 0
TemporaryFolder: BTStemp

BTS 2006 FTP Adapter spooling permissions

ERROR RECEIVED WITH ABOVE CONFIG:

"A failure occurred when moving the file from the spooling folder to the destination folder.

Please verify the destination folder has the correct permissions."

The file is transmitted to the temporary folder, but moving it to 'destfolder' is unsuccessful.

Is anyone out there familiar with the Temporary Folder option when performing an FTP send from Biztalk server, to an internal FTP site?

Is this a firewall issue, if so, then why can transmission complete when the temporary folder is not configured?

Thanks,

Tom
