International Customers can Buy via PAY PAL

Pack Contains:

DVDs of SAP 4.7 IDES + 1 DVD of SQL 2005 ENT, Oracle9i ENT, Crystal Reports 11, Installation Guides and Latest e-books on SAP R/3

What is SAP IDES (Internet Demonstration and Evaluation System)?  
SAP IDES is a normal R/3 but with lots of DEMO data.

The system that contains several sample companies typifying relevant business processes. It is simple to use and has a variety of master and transaction data, and is used for demos, online/classroom training, and presentations. Potential customers use IDES to trial and test software via Internet.

SAP IDES – the "Internet Demonstration and Evaluation System" in the R/3 System, represents a model company. It consists of an international group with subsidiaries in several countries. IDES contains application data for various business scenarios that can be run in the SAP System. The business processes in the IDES system are designed to reflect real-life business requirements, and have access to many realistic characteristics. IDES uses easy-to-follow business scenarios to show you the comprehensive functions of the R/3 System. The focal point of IDES, however, is not the functionality itself, but the business processes and their integration.

IDES not only covers the Logistics area, but also Financials, and Human Resources. It demonstrates how the R/3 System is able to support practically all types of industries, from discrete production through to process industries, from engineering-to-order to repetitive manufacturing. However, IDES is not a sector-oriented model company. The individual processes are based on practice-oriented data for sectors such as Retailing or Banking. The IDES group manufactures products as diverse as elevators, motorcycles, and paints.

IDES is managed by SAP just as any regular business enterprise. SAP regularly updates the IDES data (master data, transaction data, and customizing). IDES also carry out period-end closing and plan with different time-horizons. Transaction data are generated to ensure that the information systems in all areas have access to realistic evaluation data. IDES are constantly implementing new, interesting business scenarios to highlight the very latest functions available in

the R/3 System. New functions are represented and documented by IDES scenarios.

Above all, IDES shows you the possibilities of the integrated applications in the SAP System. IDES cover all aspects of a business enterprise, including Human Resources, Financial Accounting, Product Cost Planning, Overhead Management, Profitability Analysis, Planning, Sales and Distribution, Materials Management, Production, and much, much more. IDES have also integrated document administration and third-party CAD systems within the IDES system. This means that you can call up and display external documents, or access CAD drawings.

IDES shows you how the R/3 System supports production processes, the supply chain, and the efficient usage of global resources. Or perhaps you would like to increase your understanding of just-in-time-production or the integration of the electronic KANBAN system in an MRP II environment? IDES provides the ideal way to learn about areas such as Product Cost Controlling, Activity-Based Costing, or integrated Service Management and Plant Maintenance. How to manage high inflation is just one of the ever-growing number of IDES business scenarios that you can choose from.
