In my case drag and drop is not usable.

I do not have full access to the machine where the assembly is to be deployed. I'm using a setup project to create a MSI which does the installation, deployment, GAC etc. automatically on the target machine.

I drag and drop the files into "C:\WINDOWS\assembly" on the target machines. As far as I can tell, this works the same as using gacutil.exe.

If this is a bad practice, I'm sure you'll see lots of replies to this message...

Is there an easy way except gacutil.exe, to make sure the assembly is in the GAC.
