Hello im using PGP command line 6.5.8 to decrypt files on mine custom pipeline but there is a problem when i reach the line code `Process process= Process.Start(psi)` everyting works fine but it does not decrypt the the file. This is on a Windows 2003 server Service Pack 1 machine in a Windows XP Service pack 2 it works perfectly

```
ProcessStartInfo psi = new ProcessStartInfo();
psi.UseShellExecute = false;
psi.WorkingDirectory = @conf.FileAscDestino;
psi.RedirectStandardInput = true;
psi.RedirectStandardOutput = true;
psi.RedirectStandardError = true;
psi.FileName = "pgp";
psi.Arguments = "+force -p " + nomFile + " -z " +
conf.PGPPhasfrase;
Process process = Process.Start(psi);
```

could any one help me??

.
