This isn't the type of exam where you will be tested on factoids you've memorized. You have to be able to apply what you've learned, like in the real world (only with crazy mixed up scenarios you probably won't encounter in the real world). The exam tests your ability to think through what you've learned and apply the best solution out of the ones you are given to the problem presented. The best preparation for this exam is to practice every concept in the book on a real live server (or two, or three, or ....) several times and hope you have problems you have to solve because that's the bet way to learn.
