Computer operating systems where Software Update Services (SUS) can be installed:

- a.. Windows 2000, Service Pack 2 or above.
- b.. Windows Server 2003.

Computers where Automatic Update is already included in the operating system:

- a.. Windows 2000, Service Pack 3 or above.
- b.. Windows XP, Service Pack 1 or above.
- c.. Windows Server 2003.

Computers where a separate Automatic Update client installation is required:

- a.. Windows 2000, Service Pack 2.
- b.. Windows XP, no Service Pack.

Therefore, I think Answer B is correct.

Without GPO, you can configure the registry to force the client machine to update with the SUS server.

Hope it can help.
