It seems that at this point in time, win2k is probably the most pertinent. Many companies are migrating from NT4 to 2000. It seems like the most logical progression, but not always. My wife works for a large company, and they are migrating from NT4 to win2k servers and XP clients. Although XP dows have some server functionality, it really isn't a true server class operating system line win2k or 2003 advanced server. If I were given the choice, take the 2000 MCSE track then, if you wish, upgrade to 2003 which will only require 2 more exams. This way you get the best of both worlds so to speak.
