seems it's missing the 'CLR ENABLE', 1 ?  
also, since vb express is free, using notepad/ed/vbc/msbuild/debug.exe seems a bit unproductive?

There's a walk through on this site that takes you through the entire process from beginning to end:  
<http://mcitpsuccess.com/blogclrsp.aspx>

It shows how to create an external dll without using Visual Studio, create the assembly in SQL Server 2005, and create a CLR stored procedure using the assembly.

Hi again,  
I have tried creating assembly but i am just confused of this. Well according to u I have configured the database engine to run CLR trigger sp. When i create a new project from BID i dont see project type SQL Server???

I  
have used RECONFIGURE.

You said we need to create assembly i tried it from SQL Server Management Studio using CREATE ASSEMBLY statement but I am confused what to specify in FROM..... i mean which dll file should i specify? Actually i am not getting the logic behind creating assembly. Please suggest.

bye.
