I have a stored procedure in SQL server which when executed returns a table of results. I would like to be able to pass in the parameters from a form into the stored procedures and then view the table of results in a html table when the submit button is clicked.

The parameters for my SQL statement are: –

@weekenddate1, @weekenddate2, @txtpub, @txtprice and @txtDescription

Can anyone help me write the asp code to pass these values into a form and return a table of results on a new html page.

My html form looks like the following: –

```
<form name="form1" method="post" action=""><table width="52%" border="0"><tr><td width="43%">FROM DATE</td><td width="57%"><input name="fromdate" type="text" id="fromdate"></td></tr><tr><td>TO DATE</td><td><input name="todate" type="text" id="todate"></td></tr><tr><td>PUBLICATION</td><td><input name="publication" type="text" id="publication"></td></tr><tr><td>PRICE</td><td><input name="price" type="text" id="price"></td></tr><tr><td>DESCRIPTION</td><td><input name="description" type="text" id="description"></td></tr><tr><td>&nbsp;</td><td><input name="VIEW_REPORT" type="submit" id="VIEW_REPORT" value="Submit"><input name="CLEAR" type="reset" id="CLEAR" value="Reset"></td></tr></table></form>
```

I will be so so so so pleased if anyone is able to help me. My asp knowledge is minimal
