In Visual Basic Iâ€™m doing the following:

```
Dim rsContent
Set rsContent = New ADODB.Recordset
rsContent.Fields.Append "Text", adVarChar, 4000
rsContent.Fields.Append "LongText", adLongVarChar, 32767
```

```
rsContent.Open
rsContent.AddNew
rsContent("Text").Value = "hello"
rsContent("LongText").Value = "here is a 30000 char long text"
rsContent.Update
```

```
rsContent.AddNew
rsContent("Text").Value = "hi"
rsContent("LongText").Value = "another long text"
rsContent.Update
```

Later in the code I need to do:

```
rsContent.Sort = "LongText"
```

and get the error.

Run-time error -2147467259 (80004005):

Relate, Compute By, and Sort operations cannot be performed on column(s) whose defined size is unknown or too large.

I can do `rsContent.Sort = "Text"`

But thatâ€™s not what I need to do.

Is there another way I can accomplish this?

Regards,

Rasmus
