Hi

I think I've already had every version of MDAC on my pc. I had 2.8, and I know I can uninstall that with dasetup /u. But I got Mdac 2.7 on my pc and would like to uninstall that, because I got it from a shady website and it is only displaying chinese/japanese characters. I don't think it got to do with a language setting on my pc, cause everything else on my pc is english.

Can somebody please help, otherwise I'll have to start to learn chinese/japanese. :)
