Hi DevelopIT,

First of all, I would like to confirm my understanding of your issue. From your description, I understand that there is a performance issue when writing a jpg file to the client using server side scripts with an SSL. If there is any misunderstanding, please feel free to let me know.

This is quite weird. And I have tried it on my computer, but cannot repro it. As you said this might have something to do with the jpg file itself. I think it might occur with jpg file particular size. Could you reproduce this with two different jpg file but with same size of file?

Kevin Yu
