

ADODB.Stream cannot open DFS file paths

It seems that with ADODB.Stream (and FileSystemObject), I cannot programmatically open files from a DFS link (ie, \\<domain_fqdn>\<dfs_root>\<dfs_link>\<file>), though the same file can be opened from a UNC path (ie, \\<server>\<share>\<path>\<file>).

I'm looking for some confirmation that this is indeed expected behavior (ie, its a known problem, and not something unique to my situation), and when, if at all, this is expected to be resolved.

My second question is whether or not the file manipulation libraries in .NET suffer from the same limitation.

Thanks,
Andrew Hollamon
