Thanx for your reply Frank.

The fields in the database are not supposed to except null values. my mistake, i should have said the first time itself that I am only inserting in the time part as these fields are only suppose to hold time data, i.e. start_time and end_time for an activity..and only the time data is entered from a VB.NET form...I even tried to check the value in the Dataset with the following code...

```
Me.DataGrid1.SetDataBinding(fr.DsProj1, "tblBilling")
MsgBox(fr.DsProj1.Tables(0).Rows(0).Item(3))
```

"DsProj1" --> is my dataset.
"tblBilling"--> is the table name.

It displays the time value correctly from the dataset that i have used to bind the Datagrid with. however I the datagrid itself it shows the date data and not the time data. Is there any special formatting that i need to do with the datagrid to display the time data in the field??

thnx for the help!!
