-

When I try and save out a recordset from an ASP page as XML I get the following error (the code is below) - I have ADO 2.8 installed and this is running on win XP sp2 :

```
ADODB.Recordset error '800a0bb9'
```

Arguments are of the wrong type, are out of acceptable range, or are in conflict with one another.

```
Const adOpenStatic      = 3
Const adLockReadOnly    = 1
Const adCmdText         = 1
Const adPersistXML     = 1
```

```
Dim rS
Dim conn
Dim sql
Dim xmlDoc
```

```
Set rS = Server.CreateObject ("ADODB.Recordset")
Response.ContentType = "text/xml"
```

```
Set conn = Server.CreateObject("ADODB.Connection")
conn.Open "DSN=Test;UID=sa;PWD="
```

ADO Recordset Save as XML error

```
set xmlDoc=Server.CreateObject("Microsoft.XmlDom")
xmlDoc.async = false
xmlDoc.preserveWhitespace = false
```

```
sql = "SELECT * FROM test"
rs.open sql, conn, adOpenStatic, adLockReadOnly, adCmdText
rs.save xmlDoc, adPersistXML
rs.close
```

```
Set conn = nothing
Set rs = Nothing
```

Any ideas? Thanks.

Pierre
