hi all

Here am using "Use Database" keyword, as the connection string will contain a different Initial Catalog

Pls let me know is there any Technical issues to execute this query (Its working fine-)

```
Public Function GenerateCreateIndexQuery(ByVal TableName As String, _  
ByVal IndexName As String, ByVal ColName As  
String, _  
ByVal dataBaseName As String)
```

```
Dim sqlStr As String
```

```
sqlStr = "USE " & dataBaseName & " IF EXISTS (SELECT name FROM  
sysindexes WHERE name = " & IndexName & ")"  
sqlStr = sqlStr & " DROP INDEX " & TableName & "." & IndexName  
sqlStr = sqlStr & " USE " & dataBaseName & " CREATE INDEX " &  
IndexName & " ON "  
sqlStr = sqlStr & TableName & "(" & ColName & ")"  
Return sqlStr
```

```
End Function
```

.
