Hi Sengai,

The TableAdapter will not generate code that implements a transaction by default. If you wish to make the TableAdapter commit a transaction to the database, you have to add SQL script yourself. The simplest way is to put BEGIN TRANSACTION, COMMIT TRANSACTION, or ROLLBACK TRANSACTION in the stored procedure. If you want to perform transactions between TableAdapters in or not in the same server, you can also use Distributed Transactions. Please check the following article for more information on it.
