I figured out my problem. Get the Errors object, don't instantiate it. Also don't send "GO" into commands that you're trying to execute.

```
_bstr_t GetProviderError(const ADODB::_ConnectionPtr& ptrConn)
{
    _bstr_t sErrors;
    if(ptrConn != NULL)
    {
        ADODB::ErrorsPtr ptrErrors = ptrConn->Errors;
        long lCount = ptrErrors->Count;
        for(long n = 0; n < lCount; n++)
            sErrors += ptrErrors->GetItem(n)->Description + "\n\n";
    }

    return sErrors;
}
```
