Hello. I am receiving the error in the subject line at compilation on the following declaration within a form file:

```
Dim rsBanks as ADODB.Recordset.
```

I have a reference in the project to the Microsoft ActiveX Data Objects 2.7 Library. Meanwhile, an earlier-created executable from this project continues to run properly using this library. There have been no updates to MDAC.

Frustrated, I created a brand new project identical to the one that is failing with the "Object library not registered" error, and it too, had the same error. I can however, create a brand new project, add a reference to the library, create an ADODB.Recordset object successfully. Moreover, I can add the very same form file that receives the error to a new project, and there will be no error.

For what it's worth, I also receive a "Method '~' of object '~' failed" error upon loading the project. I know this may not be enough information, but if you can point me to what information you might need to help me resolve this, I will love you forever and ever, amen. I will also copy and paste the .vbp file after I sign my name.

Thanks!
John
