Reference=*G{EF53050B-882E-4776-B643-EDA472E8E3F2}#2.7#0#..\..\WINNT\system32\msado27.tlb#Microsoft
> ActiveX Data Objects 2.7 Library
```

<snip>

You might try changing the following line...

```
>
Reference=*G{EF53050B-882E-4776-B643-EDA472E8E3F2}#2.7#0#..\..\WINNT\system32\msado27.tlb#Microsoft
> ActiveX Data Objects 2.7 Library
```

to...

```
Reference=*G{EF53050B-882E-4776-B643-EDA472E8E3F2}#2.7#0#C:\Program
Files\Common Files\system\ado\msado27.tlb#Microsoft ActiveX Data Objects 2.7
Library
```

in your .vbp file. Don't forget to make a backup copy first.

ADO is normally installed in the Program Files\Common Files\system\ado folder not the System32 folder. This may be the fault of some other software you installed or something to that effect. If that does not help the only other thing I can think of is to use this instead...

```
Reference=*G{2A75196C-D9EB-4129-B803-931327F72D5C}#2.8#0#C:\Program
Files\Common Files\system\ado\msado15.dll#Microsoft ActiveX Data Objects 2.8
Library
```

Do not let the name fool you, this could also be the dll v2.7 just depends on the latest MDAC installed. If you do not have 2.8 installed then create a new project and cut and paste that reference instead as the GUID should be different.
