Hi everyone,

I'm trying to track down some bugs that I read about at <http://www.aspfaq.com/show.asp?id=2188>. I'm connecting to a SQL database in ASP. Does anyone know specifically what configurations (e.g., what versions of MDAC, what types of connections, etc.) cause these bugs to appear? (I'm most concerned about the bugs that cause no error to display but return no data from the field.)

Just to save everyone some time, here is a link to the original discussion about this in .inetserver.asp.db.

http://groups.google.com/group/microsoft.public.inetserver.asp.db/browse_frm/thread/a65f28fe57952bbc/ab357bf1dcb

I was the one who advised Brian to post here, in case someone here could add anything to what we already told him.
