Hi All;

Actually I want to write path in a table "TechDBFormsPathTable" of column " path "

Recordset gets the correct value but its not writting into the table "TechDBFormsPathTable"

if I try in independent application when recordset is closed. it is updated.

in this scenerio i can't close the recordset.

if i tried i got error "Insufficient key column information for updating or refreshing"

update() function is not working ...same eror is coming...

bottomline..... " not able to update table at run time"

```
recSet.Open(dbOpenTable, _T("qryGetDatabaseName")); // stored
query with select statement
if (recSet.GetRecordCount() > 0)
{
CDaoFieldExchange* pFX = NULL;
if(bWriteToTable)
pFX = new CDaoFieldExchange(StoreField, &recSet);
else
pFX = new CDaoFieldExchange(LoadField, &recSet);
recSet.DFX_Text(pFX, _T("path"), m_cwTechDBPath);
if(pFX)
delete pFX;
BOOL CDaoRecordset::DFX_Text(CDaoFieldExchange* pFX, CString strName,
CString& strVal)
{.....

_variant_t varVal((_bstr_t)strVal);
m_pQueryRecordset->GetInnerObject()->Fields->Item[bstrName]->Value =
varVal;
```

it is storing properly but not updating into the table of field path.

```
}
```

not able to update Table using ADO Recordset.

```
Stored query qryGetDatabaseName contain " SELECT  
[TechDBFormsPathTable].[Path]  
FROM TechDBFormsPathTable"
```

table TechDBFormsPathTable contain only field path having data type memo which supports Unicode .

Pls Pls help me out .. I am trapped...

Thanks in advance....

.
