I have a strange problem that only occurs against MDAC 2.8 where the library set is at 2.82.1830 (previous 2.80.1064 and 2.81.1128 all work fine).

The application is a 3-tier one that has been in production for a few years, the issue occurs after the dataset

I presume you mean "recordset" .. ? ADO has no "dataset" object.

has been returned to the middle tier at the point the dataset is converted to XML to be sent to the client application.

The call to save the dataset to a stream works fine when doing via the PersistADTG but no longer when doing PersistXML.

And what is the failure mode? Error message? No result? Incorrect result?

Show us how to reproduce the symptom.
