I would like to delete a single record, however the result of my code is that the complete recordset is deleted

Can anyone help me out here????

Here is my code

```
Sub DeleteAdvisor()  
Dim cnn As ADODB.Connection  
Dim rst As ADODB.Recordset  
Dim strSQL As String  
Dim OfferDB as String  
dim advisorid as string  
  
Set cnn = New ADODB.Connection  
  
With cnn  
.Provider = "Microsoft.Jet.OLEDB.4.0"  
.Open OfferDB  
End With  
  
Set rst = New ADODB.Recordset  
  
With rst  
' Open the Recordset object.  
advisorid = "12"  
  
strSQL = "SELECT * FROM Qry_Invul_Adviseur WHERE Adviseur_id = "  
"  
& advisorid  
.Open Source:=strSQL, _  
ActiveConnection:=cnn, _  
CursorType:=adOpenKeyset, _  
LockType:=adLockOptimistic  
End With  
  
rst.MoveFirst
```

Delete a single record instead of entire recordset

```
rst.Delete  
rst.Close  
cnn.Close  
Set rst = Nothing  
Set cnn = Nothing  
End Sub
```

.
