Did you find any improved performance (mainly SELECTS) with OLE DB drivers as compared to ODBC?

No, I have never made that comparison.

I suspect to be fair, I would have write in pure OLE DB as ADO comes with its own baggage which I dont believe is huge but nevertheless does contribute.

I have seen an OLE DB template library and that seem attractive to program in.

I would also have to make sure that OLE DB was native anmd not piggybacking on top of ODBC drivers.
