Hello,

Right of the mind of =?Utf-8?B?dGIam9obnM=?= enjoy these words:

> *I have been trying to get connectivity with my ASP pages with a FoxPro
> 6.0 database that's located on a Windows 2000 server.*

Remote access?

> *The drivers
> are the same version with regards to the System DSN i created, so I
> believe it is an issue with IIS 5.1.*

I think it has something to do with user rights – and I'm talking about the user IIS especially ASP is running.

> *Has there been any
> patches/updates/bug reports regarding ASP/FoxPro/Win 2k/IIS 5.1?*

Actually I don't think cause it's working if the access rights are granted for the IIS/ASP user.

> *I
> have Read, Execute, and Scripts on, yet there is still nothing.
> Please help, thanks.*

I != ASP user – right?

Take a look at this chapter about accessing remote VFP databases:

<http://www.afpages.com/docs/en2/accessingthenetwork.htm>

Don't mind that it's talking about Active FoxPro Pages – with ASP it's the same stuff. *g*

Regards, JoKi
