Hi Folks,

Very strange situation here. I was uninstalling reinstalling sybase 12.5.1 to try to take care of some connection issues and now my ODBC admin show no drivers. The drivers tab is empty and when I click Add in either User or System DSNs no drivers appear. I reinstalled sybase and MDAC and even reinstalled SP2. I think something's screwy in the registry but HKEY_LOCAL_MACHINE\SOFTWARE\ODBC\ODBC.INI and HKEY_LOCAL_MACHINE\SOFTWARE\ODBC\ODBCINST.INI both look fine. Is there some other file/registry key I'm not seeing that may be corrupted?

Thanks,

Jeff
