Hi

I am working on a databases in VC++. I'm having the following problem that in a function i've written these lines of code. The CreateInstance function works fine with uuid(Command) on one system(Win XP) but returns "-2147467262" (Interface not supported ) as hr value on other system(win 98) . Also thing to note is that CreateInstance for pConnection works fine on both systems. can someone tell me what could be wrong with Command Object. Is there any chance that Command Object is not available on other system..if yes then how can it be made available.

Regards  
Usman Jamil

```
//Here is the piece of code
_ConnectionPtr pConnection = NULL;
_CommandPtr pCommand = NULL;
HRESULT hr = pConnection.CreateInstance(__uuidof(Connection));
hr = pCommand.CreateInstance(__uuidof(Command));
```

thanks,  
Kumar
