Anton,

I have a question that when I "using System.data", there is no option show up that I can chose oracleclient. only sqlclient and OleDb selectable. I have visual studio .net 2003 installed on win2k3 server, and it has oracle application server 10g and oracle client 10g installed on this server also. I checked that I have System.dat.OacleClient.dll on C:\WINDOWS\Microsoft.NET\Framework\v1.1.4322. I installed .net 2003 on D: drive.

Could you help me figure out what is wrong?

Thanks,  
cms123
