I suggest to place a break and check that both strSqlServerName and strSqlServerDbName are string equal to an existing mdb and catalog, respectively. (For the mdb could use a file.exists. For the catalog can check the oledbschemaGuid.)

Hi,

I have this code

```
try
{
    m_DbConn = new OleDbConnection("Provider=SQLOLEDB.1;Data
Source="+strSqlServerName+"; Integrated Security=SSPI; Initial
Catalog="+strSqlServerDbName);
    m_DbConn.Open();
    m_bDbConnInUse = true;
}
catch (Exception e)
{
    throw new Exception(e.Message.ToString());
}
```

to try to connection to sql server 2005 with OleDbConnection. It keep saying that I can't connecto to the database.

Any help is greatly appreciated,

thanks,

aj
