I'm using ADOMD .net to work with XMLA to reach an OLAP Server  
I'm trying to get xmla working on 3 Windows Server 2003 machines, here  
is the error I'm getting on all of them

Because the user cannot be identified, the session cannot be  
used.Microsoft.AnalysisServices.AdomdClient.AdomdErrorResponseException:  
Because the user cannot be identified, the session cannot be used. at  
Microsoft.AnalysisServices.AdomdClient.XmlaClientProvider.Microsoft.AnalysisServices.AdomdClient.AdomdConn  
requestType, Boolean sendNamespaceCompatibility) at  
Microsoft.AnalysisServices.AdomdClient.AdomdConnection.RetrieveSchemaRowsets(Boolean  
createSession) at  
Microsoft.AnalysisServices.AdomdClient.AdomdConnection.ConnectToXMLA(Boolean  
createSession, Boolean isHTTP) at  
Microsoft.AnalysisServices.AdomdClient.AdomdConnection.Open()

I'm using this connection string  
<add key="ADOMDConnection" value="DATA  
SOURCE=<http://localhost/xmla/msxisapi.dll:Catalog=mycatalog:></add>>

using the provider name in it doesn't make a difference;  
I have configured the datasources.xml to receive http connection, added  
the datasource I need into it.

I have also enabled the Web Service extension for msxisapi.dll. Cannot  
find instructions anywhere to help me with this problem.  
Anybody encountered the same problem anywhere else? Anysuggestion would  
be greatly appreciated. Thanks

.
