DON'T EVER DO THIS PIECE OF CRAP. Taking stuff from NTDDK.H to it's own file just causes a maintenance headache, doing this produces a mess. I have as a consultant reviewing products shot down a major hardware purchase, because the idiots who did the driver, did this type of shit, the last I know the OEM hardware company was suing the consultants who pull this.

In this case the persons problem is obvious. He is trying to build a WDM driver which doesn't support the call. Change the include to only include ntddk.h which is a superset of wdm. And change the DRIVERTYPE in the sources file to DRIVER instead of WDM.
