My Vfw driver works OK in Messenger 7.0 (Conversation and webcam) and other video applications, the only issue I have is with NetMeeting querying my driver for its default size and not using 128 X 96, 176 X 144 or 352 X 288.

See <http://support.microsoft.com/default.aspx?scid=kb:en-us:192866> for explanations of the black borders, here is what is stated "When your computer is configured to use a video capture adapter that is not registered with NetMeeting, NetMeeting queries the video capture adapter for its default capture frame size..."

My driver supports both still capture and streaming.
